Caen Announces New –48 Volt Power Supply Support for Most Standard-Line Enclosures – Telephone Company Customers Confident About the Reliability of Fully UL Certified Hot-Swap Power

Caen Engineering is One of the First Major Enclosure Manufacturers to Provide a High-Quality, Reliable Tel-Co Solution with Fully Redundant, Hot-Swap –48 Volt Power Supplies. Caen's Standards for Manufacturing Quality Allow Them to Gain Underwriter Laboratories Certification Ahead of Schedule.

Orange, CA - July 04, 1997: Caen Engineering, Inc. is the one of the first custom RAID enclosure manufacturers to offer high-quality, Telephone Company compliant solutions. Resellers in the Tel-Co industry have a new resource for finding reliable RAID rackmount enclosures that meet all of the rigorous requirements that their industry customers demand.

Robert Calderwood, Chief Electrical Engineer and Quality Control Manager for Caen Engineering said today, "We founded this company in 1976 as a power supply and test equipment manufacturer. When we discovered that our primary market was being flooded with inferior quality, plastic 'import' enclosures, we decided to combat this trend by engineering our own. We took our expertise in electrical engineering, combined it with some of the finest raw materials available, and designed a product line that engineers would be proud to support! Our high-quality American made products were sure to succeed, just take a close look at our competition's products and you'll understand why."

The recent addition of –48 Volt power supplies to Caen's ever growing line of reliable mass data storage enclosures is proof positive that they have what it takes to meet the needs of their customers. After all, who would you rather have manufacturing your mission critical, power dependant RAID system? You could choose to trust a company that buys its components from the lowest bidder and hopes that they will work; or would you

-- more --

decide to select a company that builds and tests their own components, and engineers their enclosures to function optimally from start to finish?

About Caen Engineering, Inc.:

Caen Engineering, Inc. is a full-service, mass data storage enclosure manufacturer, integrator, and solutions provider that sells directly to Resellers, VARs, VADs, Distributors, Integrators, and OEMs. Caen offers practical, custom-engineered, complete turnkey solutions for today's challenging RAID technology market. All Caen Engineering products carry a one-year warranty, 100 percent testing and free limited technical support.
